

WE BUILD FROM A TO Z

STEEL HALLS

STEEL HALLS

We are a recognized constructor of prefabricated steel halls.

We provide full construction process: from a design to a finished structure.

Our offer also includes professional modernizations of existing structures, and we are able to adopt these structures to Customers' requirements. It doesn't matter if you need to set a new production line requiring modernization of the hall structure or adopt the structure to absolutely new purposes – we provide you with suitable means for implementation of your plans. You may also count on our technical support.

In a unique way, we combine the qualifications of a manufacturer and general contractor. We have our own sheet metal manufacturing and working plant, which provides services from simple to more complex, often customised (e.g. casings, gutter systems or caissons) sheet metal processing.

Our production lines, fitted with modern equipment, enable us to perform tasks requiring special steel and aluminium welding, soldering, riveting and spray or powder painting.

Our Customers are investors from Poland and abroad. Always demanding, often loyal. A reliable and solid partner is a guarantee of their success in the market.

What are your expectations?
